

Train your workforce. Boost production. Minimize downtime.

Enhance workforce productivity and safety through Komatsu's range of training solutions. We offer convenient online learning, hands-on classroom training and immersive virtual reality (VR) simulators to help develop the skills your workforce needs to succeed.

Utilizing the latest technology and interactive learning experiences, our training programs are designed as a series of building blocks, with each step building on the last to help ensure your operators retain knowledge and continually increase proficiency.

Improve productivity

 **Bridge knowledge and skills gaps:** E-learning provides the foundational knowledge needed to achieve higher levels of learning and retention during classroom and simulation training.

 **Boost production:** Bring novice operators up to the production level of seasoned, experienced operators within a short time utilizing immersive simulations.

 **Minimize downtime:** Knowledgeable technicians are equipped to help streamline maintenance and repair activities, minimizing downtime and enabling proactive action.

Enhance safety

 **Train in a controlled environment:** Training is performed in a controlled classroom or virtual environment to promote safety and help protect your personnel and equipment.

 **Improve situational awareness:** Operators run equipment in a simulated environment to help build muscle memory through active, hands-on learning, enabling them to focus on other aspects of operation while on the job.

 **Knowledge empowers safety:** A well-trained workforce promotes a safer workforce. Understand the inner workings of Joy equipment and safe work practices to help mitigate risk.

We work with you to understand your needs and tailor training to your requirements

E-learning

*Learn at your own pace,
anytime, anywhere*

Learn at your convenience with training available 24/7. Track progress and performance with program status reports and assessments. Gain access to additional training tools, such as circuit animations, repair and replacement animations, and 360-degree virtual machine tours.

Classroom

*Let the expert come to you with on-site,
hands-on classroom training*

Get in-depth machine training on your equipment's mechanical, hydraulic and electrical systems, led by an experienced expert. An interactive electrical training panel provides advanced hands-on troubleshooting.

VR simulators

*Prepare your operators safely and effectively
with fully-immersive VR simulators*

Train operators in a fully-immersive environment with our VR operator simulators, providing the same controls and touch-and-feel of actual Joy machines.

Retention
